## GCE HEALTHCARE

### **GCE HEALTHCARE**

Medical gas equipment is at the heart of what we do. At GCE Healthcare, we understand the need for high standards of safety, quality and reliability.

With exceptionally high safety, precision and hygiene requirements, medical-gas applications command specialised knowledge and experience with extensive understanding of respiratory and aspiration conditions and patient care. Compliance with quality standards according to Medical Directive 93/42/EEC is not only a regulatory obligation, but it is also a means of ensuring that our customers receive the high-quality and safe products they deserve.

GCE supplies complete systems for the supply of medical gases typically oxygen, nitrous oxide, air plus vacuum systems to hospitals, ambulance builders and service providers, emergency services and home-care providers, as well as other special services using this equipment.

WE MAKE MEDICAL GAS USABLE.

# EMERGENCY CARE PRE-HOSPITAL

A medical emergency is an injury or illness that is acute and poses an immediate risk to a person's life or long term health. Depending upon the nature and severity of the emergency, and the quality of any treatment given, a patient may require the involvement of many levels of care, from a first aider to an emergency physician or specialist surgeons.

GCE Emergency range provides product solutions for resuscitation, ventilation and administration of gases that meet these requirements in an often challenging environment with exceptionally high safety and precision. The primary products in the Emergency range are resuscitators, demand valves and ambulance gas supply and management systems.

*...for the most important moments in our lives*

WE MAKE MEDICAL GAS USABLE.

# HOSPITAL CARE HOSPITAL WARD

Hospital Ward Equipment is a long standing competence for GCE Healthcare. These products are intended for use in hospitals but many also feature as part of the ambulance equipment portfolio. Products are primarily used for oxygen therapy and suction.

GCE provides a wide assortment that includes a variety of flow metering devices for oxygen therapy such as ball flowmeters, flow selectors and low pressure regulators. For suction needs GCE offers both vacuum regulators for hospitals with an installed vacuum source and suction ejectors for suction utilising gas where a vacuum source is not available.

Alongside these primary groups of products GCE also offers: humidifiers, suction bottles, flexible hoses, quick couplers, rails, trolleys and many other accessories.

*...for safe care*

WE MAKE MEDICAL GAS USABLE.

# HOSPITAL CARE CENTRAL GAS SUPPLY

GCE supports installers in satisfying installation standard ISO 7396 and other national installation standards with safe and secure products guaranteed through extensive production testing. Our range features complete solutions for the Hospital medical gas distribution system from cylinder valves, high pressure manifolds, stabilizers, alarm systems, ball valves, shut off valve boxes, pressure watches and accessories up to the gas outlets all in accordance with International legislation.

Manifolds systems are a primary source for medical gases in hospitals. Main function is reducing pressure from high pressure cylinders and tanks to the pressure level required for use in the hospital pipe line. Manifolds are required to satisfy the robust requirements of international medical installation standards ensuring the safety of patients.

Emergency shut-off valve systems are provided to isolate sections of the pipeline distribution system for maintenance, repair, planned future extensions and to facilitate periodic testing.

Medical gas outlets (terminal units) provide quick and easy connection of hospital ward gas equipment to the hospital gas source. The specific type of medical gas outlet is dictated by national standards.

WE MAKE MEDICAL GAS USABLE.

# HEMOCARE POST HOSPITAL CARE

GCE Homecare provides oxygen therapy solutions to homecare providers, hospitals & clinics to be used by patients in their home environment whilst supporting mobility.

The main products in the range are stationary and portable concentrators, pneumatic and electronic gas conserving devices and accessories. Patients usually operate the equipment themselves as such devices must be safe and simple to use and maintain. The use of GCE Clarity connected technology allows service providers and clinicians the ability to monitor prescription adherence and device performance.

GCE Homecare offers a competitive product package in compliance with international medical quality standards and directives. The GCE global logistic platform with local market presence and services worldwide, means that GCE Homecare can provide short lead times and offer a high level of support.
